# **Sterility**

Bacterial and Fungal Contamination: Samples are inoculated and cultured in blood agar plate, thioglycolate broth, tryptocase soy broth and sabouraud dextrose agar.

Specification: No growth must be observed.

Mycoplasma: Samples are tested for mycoplasma contamination using a PCR-based assay and direct

culture.

Specification: Results must be negative.

Endotoxin: Samples are tested for endotoxin contamination with LAL test.

Specification: Results must show  $\leq 25EU/ml$ .

### **Cell Culture Testing**

Each batch of growth medium is tested for its ability to support in vitro growth of human mesenchymal stem cells. When are cultured in growth medium, cells must demonstrate a doubling time of 18~24 h, can proliferate for  $\geq 5$  passages, and that  $\leq 5\%$  of cells exhibit spontaneous differentiation in each passage.
