Sterility

Bacterial and Fungal Contamination: Samples are inoculated and cultured in blood agar plate, thioglycolate broth, tryptocase soy broth and sabouraud dextrose agar.

Specification: Results must be negative.

Endotoxin: Samples are tested for endotoxin contamination with LAL test.

Specification: Results must show $\leq 25\text{EU/ml}$.

Cell Culture Testing

Each batch of growth medium is tested for its ability to support in vitro growth of rat adipose-derived stem cells. When are cultured in growth medium, cells must demonstrate a doubling time of 18~24 h, can proliferate for ≥ 5 passages, and that $\leq 5\%$ of cells exhibit spontaneous differentiation in each passage.
